Don't trust probiotics with hidden identities

# What is your probiotic hiding?

## Unidentified Strains

Many products fail to fully identify the microbial strains and may not be "probiotics" at all.

## Unknown Potency

Many product labels list the potency at date of production, not expiration.

## Unknown Benefits

Only a few of the thousands of potential probiotics have adequate scientific support.

## Questionable Combinations

Many products offer a "one-size-fits-all" approach or contain multiple strains that may not be complementary.

## UltraFlora™ Probiotics

Scientifically verified strains with established health benefits\*

- Immune health support\*
- Digestive health support\*
- Microbial balance support\*
- Relief of intestinal distress\*
- Relief of minor gastrointestinal (GI) pain\*
- Bowel regularity support\*

### Why take a probiotic supplement?

Probiotics are naturally occurring microorganisms within your GI tract. But unhealthy diets, stress, and other factors can disrupt the body’s balance of “good” and “bad” microorganisms and affect digestive and immune health. A quality probiotic can help promote a healthy microbial balance and relieve digestive discomforts.\*

### UltraFlora formulas are different

Not all “probiotic” strains are created equal. Depending on the manufacturing source, probiotics can vary significantly in potency, efficacy, and predicted safety. And specific strains can have very different effects on health. The UltraFlora line makes it simple with 9 distinct formulas to meet individual needs. More importantly—the purity, clinical reliability, and predicted safety of our formulas are guaranteed through the scientific identification of strains with established health benefits.\*

# Proprietary Formulas for Personalized Health Support\*

## Daily Support\*
